

UL969

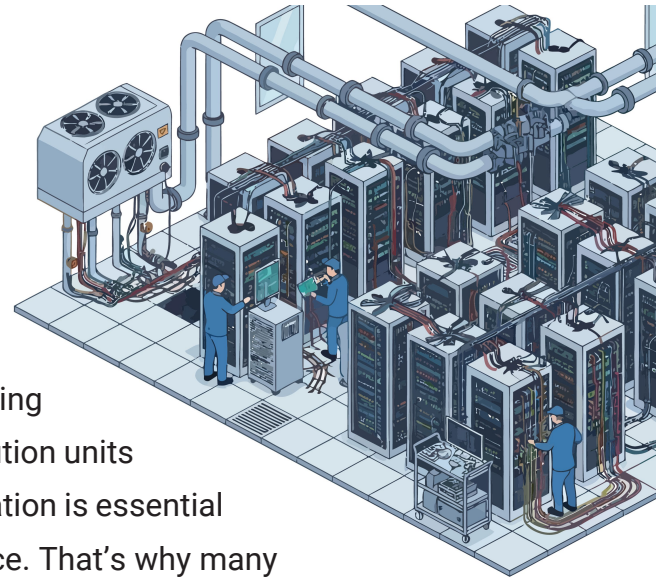

for Data Centers

MELROSE
Technical Solutions Through Expertise & Partnership

WHAT IS UL969?

UL969 is the Underwriters Laboratories standard for marking and labeling systems for electrical and electronic equipment. It ensures labels remain securely attached and legible throughout the life of the product, even when exposed to heat, cleaning chemicals, and regular handling.

Data centers are designed for maximum reliability and every component, including product labels, plays a role in keeping operations running smoothly. From servers and power distribution units to cooling equipment and network hardware, durable identification is essential for installation, maintenance, safety, and regulatory compliance. That's why many equipment manufacturers specify **UL969 compliant labels**.

APPLICATION

Some of the most common applications in data centers include:

- **Equipment ID Labels:**
Model numbers, serial numbers and regulatory information.
- **Safety & Warning Labels:**
High-voltage, electrical hazard, and caution labels that must remain readable for the life of the equipment.
- **Barcode & Asset Labels:**
Durable labels that support inventory control, maintenance and equipment tracking.
- **Rack & Cabinet Identification:**
Clear identification helps technicians quickly locate and service equipment.

UL969 COMPLIANT LABELS

A failed label can create unnecessary downtime and make equipment more difficult to identify or service. For manufacturers, choosing the right label construction helps ensure products meet customer expectations while reducing service and maintenance issues.

UL969 compliant labels are designed to provide:

- **Long-lasting adhesion**
- **Excellent print durability**
- **Resistance to heat and abrasion**
- **Reliable barcode and QR code readability**
- **Compliance with electrical equipment requirements**

Whether you're building servers, power systems, cooling equipment, or networking hardware, Melrose can provide durable labeling solutions designed to perform for the life of your product.
